

Moore & Wright

METROLOGY ESSENTIALS

Moore & Wright

A Brief History

Founded in 1906 by innovative young engineer, Frank Moore, Moore & Wright has been designing, manufacturing and supplying precision measuring equipment to global industry for over 100 years. With roots fixed firmly in Sheffield, England, the company began by manufacturing a range of calipers, screwdrivers, punches and other engineer's tools. Following investment from Mrs Wright, a shrewd Sheffield businesswoman, Frank was able to expand the business and further develop his innovative designs.

By the mid-nineteen twenties, thanks to the company's enviable reputation, Moore & Wright was approached by the UK Government to consider manufacturing a range of quality micrometers. It was in this field that Moore & Wright's status as UK agent for the Swiss Avia range of products and subsequent acquisition of the Avia brand and manufacturing rights, proved invaluable. A set of working drawings was obtained from Switzerland and reworked based on popular American designs, whilst incorporating Moore & Wright's own innovations. The ensuing range of high quality instruments resulted in world renown for Moore & Wright micrometers. These early, classic designs are regarded as the origin of today's comprehensive range of micrometers, now used in every industrialised country throughout the world.

During World War Two, the overwhelming demand for Moore & Wright micrometers resulted in the opening of two further factories in England with production levels reaching an incredible 20,000 micrometers per month.

By the end of World War Two, control of the company had passed to Frank Moore's daughter who subsequently sold the business to John Shaw Company in 1945. John Shaw recognised the skill and business acumen of the Moore & Wright staff granting them a level of autonomy. This allowed them to continue to develop innovative new products that could be marketed in both the UK and overseas. Soon the company was producing a diverse range of precision tools, including small hole gauges, telescopic gauges and a wide range of vernier calipers.

By the early 1950s Moore & Wright's vastly expanded product portfolio and increased levels of production, meant that it had outgrown its current production sites. The answer to the company's manufacturing bottlenecks was to be found in a new state-of-the-art production facility in Sheffield.

In 1970, Moore & Wright was acquired by Neill Tools Group, when the John Shaw Company was purchased by Neill Tools. The years that followed saw an increased threat to company sales from products exported to the UK from overseas manufacturers. Helped by the purchase of well-known micrometer manufacturer, Shardlow and the quality caliper producer Bensons, Neill Tools jealously defended Moore & Wright's business. The company also embarked on a progressive micrometer design and development programme. After adopting the suggested manufacturing and product design improvements, Moore & Wright launched Micro 2000, the world's first hand-held electronic micrometer. The company was proud to be awarded the coveted Queens Award For Technological Achievement in 1977 for this groundbreaking new product.

Now part of Bowers Group and with production facilities in the UK and China, Moore & Wright continues its commitment to supplying worldwide industry with high quality, affordable products. Its ongoing pledge to research and development should ensure that this great British company remains at the forefront of global innovation.

CASE STUDY

CALIPERS

Moore&Wright Demonstrate Longevity in Practice with Tooling Specialists Robert Sorby

Working at the heart of the UK's steel and toolmaking industry since 1828, Robert Sorby has developed a truly global reputation for producing the finest edge woodworking tools. All its tools are made with the highest quality steel, which is hardened and tempered to its own specification. Polished flutes and hand-finished handles are typical of the quality and attention to detail that have always been the hallmarks of the Robert Sorby brand.

The use of hand tools, particularly Moore & Wright instruments, plays a crucial role in Robert Sorby's manufacturing processes. The Moore & Wright hand and workshop tools ensure precision, accuracy, and alignment of mating components, thereby facilitating smooth assembly, and improved final product quality.

Mark Furniss, Quality & Technical Engineer at Robert Sorby, said:

“ Moore & Wright hand tools are the backbone of precision and have been invaluable in the manufacturing of Robert Sorby's woodworking tools. With the exceptional accuracy and reliability, these tools enable our craftsmen to create the finest quality products that stand the test of time. Our partnership with Bowers Group is longstanding and the continued support from the team is second-to-none. ”

Every Robert Sorby tool is unique and hand-finished with the utmost care and attention to detail awarded to every piece, each of which is guaranteed to last a lifetime. By combining traditional processes - some of the techniques used to craft tools have remained unchanged for centuries - with modern equipment, Robert Sorby is able to blend 21st-century manufacturing methods with centuries-old crafting techniques.

The traditions of the company go hand in hand with its vision for the future. Always looking to develop new techniques and ways of working, with the sole purpose of enhancing its products and delivering a superior customer experience, which is why Robert Sorby works closely with reputable brands to fine-tune its manufacturing processes.

Moore & Wright tools have been an integral part of Robert Sorby's operations for the past two decades. These tools are primarily used in areas where inspection and precision play a critical role. By using Moore & Wright tools, Robert Sorby aims to maintain continuity, repeatability, and alignment accuracy of their components throughout the manufacturing process.

Used daily, shopfloor personnel predominantly utilise these tools, however they are readily available to anyone requiring them. This accessibility ensures that all team members can contribute to maintaining the high quality and precision standards set by the company.

The 1961M micrometer and the 150mm digital calipers are amongst the most frequently used Moore & Wright hand tools at Robert Sorby. The micrometer is employed for measuring critical diameters of turned components, while the digital calipers are used for length, depth, and dimensional measurements. Machining centre operators primarily rely on the digital calipers for their measurement needs.

The decision to invest in Moore & Wright tools was driven by multiple factors. Firstly, Robert Sorby's Quality Inspector had prior experience working with Moore & Wright tools not only as an apprentice but later in his career, and therefore recognised their value in maintaining exacting standards and tolerances. Additionally, the reputation of the Moore & Wright brand as a reliable and renowned tool manufacturer further solidified the decision to invest in their products.

The integration of Moore & Wright tools has brought about significant improvements for Robert Sorby. The tools are easy to use, providing a comfortable grip and ensuring accuracy in measurements. These precision instruments have solved the challenges posed by antiquated and unreliable measuring tools, resulting in enhanced product quality and improved manufacturing processes. The collaboration with Bowers Group, the distributor of Moore & Wright tools, has been exemplary, with prompt support and useful advice when needed.

By investing in these precision instruments, the company has achieved greater accuracy, maintained high-quality standards, and met customer expectations, as well as having become an essential element in achieving manufacturing excellence.

The partnership between Robert Sorby and Moore & Wright exemplifies the value of utilising top-quality tools to enhance processes and deliver superior products in the woodworking industry.

Workshop Vernier Caliper 105 Series

At a Glance

- Standard DIN 862
- Standard workshop model with locking screw
- 4-way measurement

Features

- With fine adjustment
- Made of hardened stainless steel
- Chromed scale with laser engraved graduations
- Measuring surface is micro-lapped
- Packed in plastic box

IP54 Water Resistant Caliper

At a Glance

- Standard: DIN 862
- Water and dust resistant to IP54 specification

Features

- Digital functions: mm/inch conversion, on/off, zero setting, ABS/INC
- Patented ceramic capacitive sensor
- 4-way measurement
- Thumb wheel for fine adjustment
- CR2032 battery

MW110-15WR

IP54 Water Resistant Caliper - Metric

Code No	Range (mm)	Resolution (mm)	Accuracy (mm)	Jaws
MW110-15WR	0-150	0.01	0.03	40mm
MW110-20WR	0-200	0.01	0.03	50mm

MW110-20WR	0-8	0.0005
MW110-30WR	0-12	0.0005

IP67 Waterproof Digital Caliper

At a Glance

- Standard: DIN 862
- Water, coolant and dust proof to IP67 specification

Features

- Functions: mm/inch conversion, on/off, zero setting
- CR2032 battery
- 4-way measurement

IP67 Waterproof Digital Caliper - Metric

Digital Caliper with Interchangeable Anvils

At a Glance

- Interchangeable anvils for internal and external groove measurements

Features

- Preset of measuring anvils required
- Glass Scale
- IP54
- SPC Data Output via cable (optional)
- CR2032 Battery
- Anvil set included
- Anvils have M2.5 thread

Digital Caliper with Interchangeable Anvils - Metric

Code No	Range (mm)	Resolution (mm)	Accuracy (mm)
MW127-30DABS	0-300	0.01	0.04

Digital Caliper with Interchangeable Anvils - Imperial

Code No	Range (inch)	Resolution (inch)	Accuracy (inch)
MW127-30DABS	0-12	0.0005	0.0015

Digital External Groove Caliper 120 Series

At a Glance

- Jaws for measuring external grooves, undercuts etc

Features

- Functions: mm/inch conversion, on/off, data-output, zero-setting, battery low indication
- Thumb wheel for fine adjustment

Digital External Groove Caliper - 120 Series

Code No	Range (mm)	Range (inch)	Resolution (mm)	Resolution (inch)
MW120-15DC	0-150	0-6	0.01	0.0005

Digital Internal Groove Caliper 125 Series

At a Glance

- Functions: mm/inch conversion, on/off, data-output, zero-setting, battery low indication

Features

- Thumb wheel for fine adjustment

Digital Internal Groove Caliper - 125 Series

Code No	Range (mm)	Range (inch)	Resolution (mm)	Resolution (inch)
MW125-15DC	0-150	0-6	0.01	0.0005

Digital Long Jaw Caliper 110-DLJ Series

At a Glance

- Digital functions: mm / inch conversion, on/off, zero-setting, ABS / zero, battery low indication

Features

- Digital functions: mm / inch conversion, on/off, zero-setting, ABS / zero, battery low indication
- Heavy duty design
- Long jaws with internal measuring nibs
- Ground micro-lapped measuring surfaces
- Thumb wheel for fine adjustment

Digital Long Jaw Caliper - 110-DLJ Series - Metric

Code No	Range (mm)	Resolution (mm)	Accuracy (mm)	Jaws	Internal Nibs
MW110-15DLJ	0-150	0.01	±0.03	60mm	10 x 5mm

Heavy Duty Digital Workshop Caliper 160-D Series

At a Glance

- Heavy duty design
- Digital functions: mm / inch conversion, on/off, zero-setting, battery low indication

Features

- Standard jaws with nibs for internal measuring, top knife jaws for external measuring
- Ground micro-lapped measuring surfaces
- Thumb wheel for fine adjustment

MW160-20D

Heavy Duty Digital Workshop Caliper - 160-D Series - Metric

MW160-30D	0-12	0.0005

Vernier Depth Gauge 170 Series

At a Glance

- Standard workshop model made of alloyed stainless steel

Features

- Mono block with locking screw
- With laser engraved graduations
- Measuring surface is micro-lapped

MW170-15

Vernier Depth Gauge - 170 Series

Code No	Range (mm)	Resolution (mm)	Resolution (inch)	Size of Base (mm)

Internal Digital Caliper

At a Glance

- For measuring bores, internal grooves and other hard to reach inside dimensions

RS232

Features

- Large LCD display
- Functions: mm/inch conversion, on/off, zero setting, battery low indication
- Auto adjusting analogue display
- 0.005mm or 0.0002" resolution

Incorporating advanced electronics, these advanced gauges have the benefit of a large digital readout and an auto adjusting analogue display. These gauges are ideally suited for measuring bores, internal grooves and other hard to reach inside dimensions.

Internal Digital Caliper

Code No	Range (mm)	Range (inch)	Accuracy (mm)	Contact Radius
MW432-01DC	5-15	0.2-0.6	±0.02	0.3mm

Double Column Height Gauge 195 Series

At a Glance

- Features dual directional mechanical counters and dial indicator for fast, error free measurements

Features

- Provided with a hand feed wheel for easy up and down feeding
- The mechanical digital counters can be set to zero at any position
- The double column combines high stability with absolute accuracy
- With carbide tipped scriber
- The counter reads steps of 1mm

HEIGHT GAUGES

Micrometer Ball Attachment

At a Glance

- Can be fitted to the anvil or spindle on external micrometer series 1961, 1965 and 1966 to enable round or irregular surfaces to be measured

Features

- The ball is hardened and moves freely to allow contact with the object being measured

Note: Always deduct the ball diameter from any reading.

878M

Micrometer Ball Attachment				
Code No	Description	Diameter (mm)	Diameter (inch)	Note
878M	6.5mm and 6.8mm	6.5 ball		1 of each spindle size supplied
878	0.256" and 0.268"		0.250 ball	1 of each spindle size supplied

Workshop Outside Micrometer 200 Series

At a Glance

- Can be fitted to the anvil or spindle on external micrometer series 1961, 1965 and 1966 to enable round or irregular surfaces to be measured

Features

- Standard: DIN 863
- Standard workshop model
- Resolution 0.01mm
- Satin-chrome scale
- Painted frame
- Tapered for easier access to difficult areas
- With tungsten carbide measuring face and constant force ratchet
- Packed in plastic box with standard and adjusting key

MW200-01BL

Workshop Outside Micrometer - 200 Series

Code No	Range (mm)	Resolution (mm)
MW200-01BL	0-25	0.01

Workshop Digital Micrometer 200 Series

At a Glance

- Standard: DIN 863
- Large LCD display
- Functions: mm/inch conversion, ABS/INC, on/off, zero-setting

Features

- Tungsten carbide measuring faces
- Hammertone finished frame with high quality insulated grip
- Tapered for easier access to difficult areas
- Constant force ratchet on thimble
- Locking lever
- Supplied with settings standard over 25mm
- Supplied in case

Traditional Micrometer, Boxed Sets

At a Glance

- Complies with BS870, DIN 863 / 1, ISO361
- Resolutions of 0.01mm or 0.002mm metric, 0.001" or 0.0001" imperial

Features

- Tungsten carbide measuring faces
- 6.5mm spindle diameter for range between 0-150mm, 0-6"
- 6.8mm spindle diameter for range between 150-300mm, 6-12"
- Speeder type ratchet
- Locking lever
- Adjusting key
- Supplied with setting standards
- Supplied in fitted case

Mechanical Digit Outside Micrometer 230 Series

At a Glance

- Standard: DIN 863
- Low cost, mechanical/digital read-out micrometer

Features

- Satin-chrome scale
- Forged steel frame with insulated grip
- Tapered for easier access to difficult areas
- With tungsten carbide measuring faces and constant force ratchet
- Packed in wooden/plastic box with standard and adjusting key

Traditional Internal Micrometers 900 Series

At a Glance

- Complies with: BS959

Features

- All models supplied in a fitted case

Traditional Internal Micrometers - 900 Series - Metric

Code No	Range (mm)	Accuracy (mm)	Head Range (mm)
901M	25-55	0.003	5
902M	50-210	0.003	10
903M	50-310	0.003	10
908M825	200-825		25

Traditional Internal Micrometers - 900 Series - Imperial

Code No	Range (inch)	Accuracy (inch)	Head Range (inch)
901	1-2	0.0001	0.25
902	2-8	0.0001	0.50
903	2-12	0.0001	0.50

Each model comprises a measuring head, a set of extension rods and a spacing collar to facilitate alternative measuring ranges. The smaller models (901, 902 & 903) have detachable extension handles.

Traditional Depth Micrometer

At a Glance

- Complies with BS6468:1984

Features 890 Series

- Fixed depth rod, 6.5mm diameter
- 63.5mm / 2 1/2" base length 16mm / 0.63" width
- 'Speeder' type ratchet
- Lock screw

Features 891 Series

- Interchangeable depth rods, 4.5mm diameter
- 63.5mm / 2 1/2" base length, 16mm / 0.63" width

Features 891 Series

- As 891 Series except for: 100mm / 4" base length

Dial / Digital Bore Gauge Sets 316 Series

At a Glance

- With interchangeable contact points
- Set of carbide tipped contact points included

Features

- Unique self centring device
- Supplied with dial indicator, resolution 0.01mm
- Packed as set with all necessary accessories to measure the complete range as shown

Digital Bore Gauge Sets

- Supplied with digital indicator with bar graph and numerical display

MW316-05

Boasting interchangeable contact points, the Moore & Wright Dial Bore Gauge Sets include the full set of carbide tipped contact points and are supplied with a dial indicator with a resolution of 0.01mm.

Digital bore gauge sets are supplied with a digital indicator featuring a bar graph and numerical display.

Flexible Magnetic Base 496 Series

At a Glance

- Magnetic force 40kg / 85lbs

Features

- Corrosion resistant chrome plated flex arm
- Holds rigidly in almost any position
- V -base for mounting on rounded surfaces

Flexible Magnetic Base - 496 Series

Code No	Description
MW496-01	Mechanically locking flexible arm

Hydraulic Magnetic Base 485 Series

At a Glance

- Magnetic force 80Kg / 175lbs

Features

- Features a unique hydraulic central lock for all arms and swivel positions
- Super solid model
- With fine adjustment
- With powerful on/off magnetic base
- Universal model which can be used for indicators with or without lug on back plate
- Accepts dial test indicators, digital indicators and normal indicators
- Dovetail groove for clamping a dial test indicator
- Super rigid

Hydraulic Magnetic Base - 485 Series

Code No	Description
MW485-01	Universal arm with single hydraulic locking knob

CASE STUDY

Moore & Wright Fuel the University of Wolverhampton Racing Team in Formula Student Competition

UWR has set its sights on success at the Formula Student competition with the help of Moore & Wright metrology tools from Bowers Group.

The University of Wolverhampton Racing Team (UWR) has set its sights on success at the prestigious Formula Student (FS) competition with the help of Moore & Wright metrology tools from Bowers Group.

Formula Student is one of the most established international educational engineering competitions that aims to develop enterprising and innovative young engineers, as well as encourage more young people to take up a career in engineering. Organised by the Institute of Mechanical Engineers (IMechE), the event is celebrating its 25th anniversary in 2023.

It places rigorous demands on participating teams, requiring them to design, construct, and race a single-seat formula-style race car. The process is one in which precision engineering plays a vital role in ensuring both optimal performance and safety of the vehicle.

As part of the annual event, the UWR team faces the challenge of creating a car from scratch that not only meets rigorous performance standards but also adheres to strict design and manufacturing tolerances. Students must demonstrate project management and innovative features within the parameters allowed. They must start with a concept and operate almost as a business, incorporating engineering design and validation, project management, hands-on manufacturing, and testing.

Bowers Group has been a valued sponsor of the University of Wolverhampton Racing Team for many years, lending its support to students pursuing careers in engineering. This collaboration has been significant in providing students with exposure to industry-standard instruments and an understanding of precision measurement principles.

Through its sponsorship, Bowers Group supplies both the UWR team and the School of Engineering with the tools needed to both maximise racing performance and enhance practical learning. These instruments mirror what professionals use, giving students a chance to gain first-hand experience that goes beyond theoretical knowledge. This support helps bridge the gap between classroom learning and real-world applications.

Paul Bates, Technical & Business Resource Manager at the University of Wolverhampton, said:

“The Moore & Wright tools available in our metrology suite offer hands-on experience for our students, including those in the Formula Student project. It helps them understand precision

measurement and the importance of accuracy.

These tools play a significant role in our Formula Student team's daily work. They rely on them for accurate measurements, and it is notable that many team members have even purchased their own sets. This speaks volumes for the tools' quality and reliability. It's great to see students carrying this practical knowledge into their future careers.”

Moore & Wright hand tools contribute to ensuring accuracy and precision during the car's construction, providing reliable support as well as helping measure critical components, making sure they match the precise specifications in the design plans. Knowing that the brand is a trusted name for precision gives the team assurance as they work meticulously to construct the racing car.

The Moore & Wright digital caliper and digital micrometer provide UWR with versatile tooling that has assisted in a variety of projects during the build of the Formula Student car, including checks to improve speed, handling, and reliability.

The team uses the Moore & Wright caliper to measure components, check brake discs, assess wheel alignment, verify engine machining, and ensure safety cage integrity. It is also used to gauge wheel hub dimensions and ensure the accurate fit and finish of multiple components.

Its digital readout eliminates the potential for human error, providing UWR with reliable measurements down to the decimal point. This particular level of precision allows the team to fine-tune its suspension setup with confidence, giving a competitive edge when it comes to extracting the maximum performance from its Formula Student car.

Engineers' Rule Set

Features

Micrometer, Vernier Caliper and Engineers' Rule Set

- Includes MW200-01, 0-25mm micrometer, MW110-15 Vernier caliper and ER106F 150mm / 6" rule
- Combined set for extra value

Micrometer, Vernier Caliper and Engineers' Rule Set

Traditional Precision Combination Set - CSM300

At a Glance

- Fully hardened and tempered precision rules with deeply etched graduations on both sides for ease of reading and long life

Features

- Fully hardened and ground datum faces to resist wear
- Centrally mounted protractor vial allows unrestricted viewing
- Protractor has full 360° scale plate, graduated 0 - 180° - 0
- Satin chrome scale plate on protractor
- Unique rule clamp allows positive location and clamping
- Square head offers the following fixed angles: 15°, 30°, 45°, 60°, 75° & 90°
- Centre head offers a fixed 90° angle, for finding the centre of round bar stock up to 120mm diameter
- Clipped corner on rule to maximise capability

Precision Combination Sets & Rules - Metric

Code No	Application Range	Description
CSM300	Precision Combination Set	Full set including 300mm rule (graduated both sides), Protractor head, Square head and Centre head
CSRM300	Rule, 300mm	mm and 0.5mm on both sides; numbered every 10mm
CSRM600	Rule, 600mm	mm and 0.5mm on both sides; numbered every 10mm

Precision Combination Sets & Rules - Imperial

CSME12	Precision Combination Set	Full set inc. 300mm / 12" rule, Protractor head, Square head & Centre head
CSRME12	Rule, 300mm / 12"	Metric graduations: in 0.5mm, numbered every 10mm Imperial graduations: 32nds and 64ths numbered every 1/8"
CSRME24	Rule, 600mm / 24"	Metric graduations: in 0.5mm, numbered every 10mm. Imperial graduations: 32nds and 64ths numbered every 1/8"

Replacement Components (To suit CSM300 & CSME12)

CSPRO	Protractor head
CSSH	Square head
CSCH	Centre head
RPCSCS-S	Replacement rule clamp screw

Universal Bevel Protractor

At a Glance

- Made of high quality hardened and ground stainless steel

Features

- High precision satin chromed scale
- Minimum reading 5 minutes
- Magnifying glass for easy reading
- With fine adjustment and acute angle attachment
- 300mm / 12" and 150mm / 6" rule
- Packed as set in plastic box

Universal Bevel Protractor

Dial Bevel Protractor

At a Glance

- Features high quality indicator
- Made of high quality hardened and ground stainless steel

Features

- High precision satin chromed scale
- Minimum reading 5 minutes
- With fine adjustment and acute angle attachment
- 300mm / 12" rule and 150mm / 6" rule
- Packed as set in plastic box

Dial Bevel Protractor

Code No	Range
MW510-01	360°

Digital Universal Bevel Protractor

At a Glance

- 360° measuring range (4 x 90°)
- Manufactured from stainless steel

Features

- Displays in deg/min/sec and decimal
- Resolution 30"
- Fine adjustment
- Battery CR2032
- Supplied with 150mm, 200mm and 300mm blades
- Supplied with acute angle attachment
- Accuracy +/- 5'

Protractor With Rule 946 Series

At a Glance

- Made of tool steel
- Satin chromed laser engraved scale
- Robust and durable design

MW946-01

Protractor With Rule - 946 Series

Code No	Length (mm)	Diameter of Scale (mm)
MW946-01	120	80
MW946-02	150	120
MW946-03	200	150
MW946-04	300	200

Traditional Depth Gauge

Features Depth Gauge

- Available with either reversible base or protractor
- Full range rule adjustment
- Readings can be fixed by means of a locknut
- Rules graduated on both sides
- Metric scales front face graduations 0.5mm, 1.0mm
- Metric scales rear face graduations 1.0mm
- Metric / Imperial scales front face graduations 1/32nd
- Metric / Imperial scales rear face graduations 1.0mm
- Length of blade 195mm / 7.68"

Features Reversible Base Type

- Accurately ground top and bottom faces allow base to be reversed, for use in confined spaces

128 Features Protractor Type

- Protractor plate is graduated 0° - 180° - 0° degrees
- Scale resolution 1/2 degree

Traditional Depth Gauge - 0-150mm				
Code No	Description	Width (mm)	Thickness (mm)	Size of Base
43M	Reversible Base	5.5	1.0	18mm, 56mm

CASE STUDY

HAND TOOLS

Scottish Furniture Maker Achieves Precision and Quality with Moore & Wright Tools

Ebony Hill uses a Moore & Wright Straight Edge and Precision Engineers Square to make high quality furniture.

To assist with this process, Ebony Hill needed a quality straight edge that would be certain not to flex. In addition, an engineer's square was required as opposed to a combination square, in order to avoid fractional variations and achieve the highest levels of precision and accuracy.

Ben Lock, Managing Director and Furniture Restorer and Maker at Ebony Hill said:

“Using the Moore & Wright engineers' square is the best way for me to set the angle of the straight edge; then I know that it is perfectly square. I used to panic doing long trenches, but since buying a the spring steel straight edge from Moore & Wright I'm finding them so much easier - the straight edge is great quality and never flexes due to it being 10mm thick!

Combine that with some F-clamps and a large Moore and Wright engineers' square, and perfect accuracy is a given. I prefer to use the engineers' square as I know it will be true every time, while in my experience, a combination square may vary a fraction from time to time. Once the straight is set and clamped, I run the base of the router off that, and the result is a perfectly straight and square groove”

Ebony Hill uses a 300mm Moore & Wright Precision Engineers' Square to set the angle of the Moore & Wright Spring Steel Straight Edge. The Moore & Wright Precision Engineers' Square meets DIN 875 tolerance of the angle, with an accuracy of 0 (µm), and is made from heat treated steel which has been precision ground and micro-lapped. The two knife-form sides have an angle of 40°.

The Moore & Wright Spring Steel Straight Edge is manufactured to DIN 866/1, with a precision ground gauging surface manufactured out of spring steel, and clear metric graduations starting 5mm in from the ends. Once the Moore & Wright Spring Steel Straight Edge is set and clamped using F-clamps, Ebony Hill runs the base of the router using the straight edge as a guide to ensure that the result is straight, accurate and precise.

Based in Edinburgh, Scotland, Ebony Hill is a small business specialising in fine furniture restoration and conservation. In addition, the business also takes commission for custom pieces of furniture including cabinets, tables and gin trolleys.

Part of Ebony Hill's ethos revolves around the understanding that pieces of furniture, and heirlooms, deserve the highest levels of attention to detail. Every piece of furniture they restore has been lovingly made by persons who share this passion for quality and craftsmanship, and every piece they make is made with the very same care.

Traditional Engineers' Level

At a Glance

- Main vial sensitivity of 1 minute
- Each level is fitted with a main, cross and plumb vial

Features

- Main vial protected by rotating shroud
- Vial solution maintains colour and fluidity under all workshop conditions
- Precision ground cast base with vee groove for location on cylindrical work

Steel Gauge Blocks 700 Series

At a Glance

- Hardened to HV820 (HRC65)

Features

- Made from high quality stress relieved alloy steel
- Excellent rigidity
- Size and serial number are engraved on each individual gauge block
- Available in 2 grades
 - Grade 1 for Inspection
 - Grade 2 for Workshop
- All sets have a MOORE & WRIGHT certificate
- All sets can be issued with a UKAS certificate at extra cost

Mic-Check Gauge Block Set MW715 Series

At a Glance

- For the inspection of Metric Micrometers according to DIN 863

Features

- Standard: DIN 861
- Inspection Grade: Grade 0
- Nominal Gauge Sizes: 2.5, 5.1, 7.7, 10.3, 12.9, 15.0, 17.6, 20.2, 22.8, 25.0mm
- Optical Flat: 30mm diameter, 12.0mm thick
- Supplied with a stand to conveniently hold the slip gauges
- Can be used horizontally or vertically
- Supplied in a fitted case with a M&W Calibration certificate

Dial Bore Gauge Setting Master 720 Series

At a Glance

- Bore Gauge Setting Master Kit for accurately setting any 2 point bore gauge up to 160mm in diameter to an accuracy of 0.01mm

Features

- Bore Gauge Setting Master Kit for accurately setting any 2 point bore gauge up to 160mm in diameter to an accuracy of 0.01mm
- Setting master and 33 piece metric gauge block set supplied in plastic case

Setting Device

- Internal range 160mm
- Depth range 25mm
- Centraliser width 70mm
- Quick-release holder for fast adjustment

Gauge Block Set

- Accuracy to DIN 861, Grade2
- 33 piece metric steel set
- Supplied in a fitted case with a M&W Calibration certificate

Steel Pin Gauge Sets

At a Glance

- Each pin is laser engraved with its size above 1.5mm

Features

- Boxed sets complete with handle
- Each pin is stored in its own tube, marked with the pin size
- Pin length 50mm
- Supplied with a certificate of conformity
- Fully hardened to 60/62 HRC
- Manufacturing tolerance +/- .002mm

Traditional Hermaphrodite Calipers

Features

Firm Joint Adjustable Point

- Manufactured from polished tool steel
- A large headed nut and screw assembly provides a firm and rigid friction joint, with no play
- The sizes listed are the effective leg length which is measured from the joint assembly
- Leg which holds the round adjustable hardened point is offset
- Model 341 has a locating spur on the straight leg

Note: Firm joint caliper capacities are generally 1/3 greater than the effective leg length.

Features - Spring Joint

- Manufactured from polished tool steel
- The marking leg is hardened to over 550Hv at the point
- Bow spring ensures uniform tension over working range
- Centrally mounted adjustment screw offers finer setting than firm joint type

CASE STUDY

Hack Engineering Ensures Quality Engine Builds with Moore & Wright Vernier Caliper

Moore & Wright vernier calipers are an invaluable tool for through process measurements on components used in performance engine builds.

Based in Barcombe, East Sussex, Hack Engineering rely heavily on Moore & Wright vernier calipers for carrying out through process measurements on components used in performance engine builds. Hack Engineering originated as a supplier of high-end performance parts for BMW, before undertaking exponential growth of the business that led to the opening of its first workshop, engine building facilities, part supply operations, and the creation of its own-branded machine shop.

Alex Lester, Technical Director at Hack Engineering said:

“Every person in the business has access to a Moore & Wright vernier caliper, and even the parts department is regularly seen using one to assist customers with double checking component dimensions. Not only is quality increased, but the wastage of parts is also reduced as measurements can easily be taken throughout various manufacturing processes.

There are so many inferior verniers are out there, and with the heavy use ours get we decided to get one of the best. The Moore & Wright vernier caliper is the perfect tool for carrying out through process measurements and for quick sanity checks. It feels good in the hand and offers repeatable measuring time and time again.”

Accurate measurement of engine components is critical to a quality engine build. When parts are machined or ordered incorrectly, it can have an adverse effect on both the performance and longevity of the engine, often resulting in a rebuild process that can hamper the profitability of the project.

It is important, therefore, to ensure that accuracy, precision and resolution is achieved throughout all aspects of the build, something that can be enhanced by choosing the correct, high-quality tools, like the Moore & Wright range of workshop tools.

Alex continued:

“When dealing with performance engines, having the right equipment not only makes the job more efficient but also allows you to offer the customer a service and a product that makes you stand out from the rest. We are always of the opinion that anyone can build an engine. But building an engine that lasts and performs at its optimum involves patience, careful measuring, and extreme cleanliness.

Being able to offer an engine that not only performs well, but also offers longevity is one of our core beliefs. This all comes down to blueprinting each component. Whether it is piston to bore wall measurements or measuring and calculating the movement in BMW's variable valve system, VANOS, the quality of the machining, blueprinting and assembly are critical. It all comes down to the measuring equipment used.

As always Bowers support is the best, a complete understanding of measuring and measuring processes is felt whenever advice or support is needed.”

In my opinion, no engineer's toolbox is complete without a vernier caliper. It's the first measuring tool to own when setting out in this trade! Without one, you may as well just guess a number.”

Founded in 2013 by Ben Koflach, the business aim of Hack Engineering was to offer knowledgeable, reliable parts supplies in the UK. With vast experience working in the historic motorsport industry, Ben invested his skills forward into opening the first Hack Engineering workshop in 2016, increasing stockholding offering VANOS rebuilds and other engine work for BMW M cars.

Traditional Inside & Outside Calipers

Features - Inside & Outside Calipers, Firm Joint

- Manufactured from polished tool steel
- A large headed nut & screw assembly provides a firm & rigid friction joint, with no play
- The sizes listed are the effective leg length which is measured from the joint assembly

Note: Firm joint caliper capacities are generally 1/3 greater than the effective leg length.

Outside Calipers, Spring Joint

- Bow spring ensures uniform tension over working range
- Centrally mounted adjustment screw offers finer setting, than firm joint type

Inside Calipers, Spring Joint

- Bow spring ensures uniform tension over working range
- Centrally mounted adjustment screw
- Manufactured from polished tool steel

Note: Firm joint caliper capacities are generally 1/3 greater than the effective leg length.

Spring Dividers

- Manufactured from polished tool steel
- Points are hardened to over 550Hv
- Bow spring ensures uniform tension over working range
- Centrally mounted adjustment screw

Note: The nominal size is the distance between the centre of the roller and the working ends of the legs.

Traditional Surface Gauges

At a Glance

- Designed for precise marking out operations

Features

- Hardened and tempered steel base, ground on one end and bottom face
- Vee groove for locating on cylindrical workpieces
- Two retractable locating pins
- Radial grooves in the side facilitate comfortable handling
- One handed fine adjustment
- Supplied with two interchangeable pillars and one 4mm diameter scribe

Note: Surface gauges can be used for mounting dial test indicators with either a 4mm or 6.35mm (1/4") mounting spigot.

Feeler Strip 126M Series & Sets

At a Glance

- Standard: DIN 2275

Features

Feeler Strip 126M Series

- Hardened, tempered and polished steel strip
- Nominal thickness is marked on each strip
- Supplied 10pc each pack

Feeler Strip Sets

- 20 piece feeler strip in wallet
- Hardened, tempered and polished steel strip
- Nominal thickness is marked on each strip
- Imperial Set: Length 6", Range 1-25 Thou
- Metric Set: Length 150mm, Range 0.03 to 1.00mm

Traditional Screw Cutting Gauges

At a Glance

- Suitable for most standard metric and imperial thread forms

Features

- Accurately milled angles for precise evaluation of thread form
- Supplied in packs of 10

Traditional Screw Cutting Gauges

Code No	Description	Pack Quantity
200	Thread form: SI, ISO, US Std. 60°. Thread form: Whitworth 55°. Thread form: British Association (BA). 47.5°. Thread form: ACME. 14.5°.	10

Traditional Radius Gauges

At a Glance

- Accurately milled steel blades

Features

- Designed to check both internal and external radii
- Marked with nominal size on each blade
- Mounted either on a ring or in a steel sleeve

204M

206M

Traditional Radius Gauges - Metric - 0.75-13mm

Traditional Screw Pitch Gauges MW800 Series

At a Glance

- Accurately milled steel blades

Features

- Designed to check both internal and external thread forms
- Marked with nominal size on each blade
- All blades fixed in a steel sleeve
- Screw cutting gauge included

Note: SI (System International) metric blades should not be used to check ISO (International Standards Organisation) metric threads due to interference of the thread forms; but ISO metric blades can be used to check SI metric threads.
